

Loop Engineering with GitHub

One principles presentation. One synthetic retail service. Five connected labs.

Your day, one loop at a time

09:00–09:45

PRESENTATION · 45 MIN

Loop Engineering with GitHub: principles and the complete loop

Understand Goal Cards, inner and outer loops, evidence, and human authority before applying them in the labs.

09:45–10:30

LAB 1 · 45 MIN

Evidence to engineering intent

Fork the station; turn synthetic evidence into one approved feature Issue and one bug Issue.

10:30–10:45

Break · 15 min

10:45–11:45

LAB 2 · 60 MIN

Goal Cards and two agent loops

Define the goals; implement locally and with the cloud agent to open two pull requests.

11:45–12:35

LAB 3 · 50 MIN

Governed pull requests

Combine checks, independent reviews, and human judgment before merge.

12:35–13:20

Lunch · 45 min

13:20–14:10

LAB 4 · 50 MIN

Trusted delivery and operational readiness

Deploy prepared test/prod resources; sign and promote the same OCI image digest through Azure.

14:10–14:20

Break · 10 min

14:20–15:00

LAB 5 · 40 MIN

Author and observe agentic outer loops

Author bounded triage; observe a prepared loop publish once and replay without another write.

15:00–16:00

TAILORED DISCUSSION · 60 MIN

Bring the loop into your practice

Explore migration from existing tools, adoption, or governance according to your team's priorities.
